

ORFIT®

ORTHO

ORFIT® ORTHO

Orfit Industries surpasses the classic plastic and rubber (-like) splinting materials

The ultimate solution for both advanced and novice splint makers who prefer the performance characteristics of rubber materials.

When activated, ORFIT® ORTHO retains its heat for a very long period of time. This gives you all the handling time you need to get the job done. Perfect edge finishing and a superb surface make ORFIT® ORTHO the ideal splint material for those who love rubber (-like) materials.

ORFIT® ORTHO is the choice of the therapist and orthotist who appreciates excellent plasticity at a higher activation temperature.

Our analysis of the market confirms that traditional splinting materials are still in demand and widely used. As a result of this assessment, Orfit Industries has developed the "New Classics" to include in our growing family of high quality splinting materials.

The "New Classics" from Orfit Industries include ORFIT® ORTHO, ORFIT® DRAPE NS and ORFIT® EASE...

They provide you with the "Best of all Worlds". You get an improved and superior surface finish, while maintaining the "feel" that you are accustomed to. The "New Classics" do not contain rubber and are not sensitive to UV light.

Orfit Industries is now able to offer you a complete selection of "memory" and "non memory" splinting materials, with the added benefit of Orfit® quality that is recognized and respected worldwide.

The "New Classics", Made Better by Orfit Industries

ORFIT® ORTHO			
Thickness	Perforation	Size	
		450 x 600 mm	600 x 900 mm
2,7 mm	Non perforated	16310.1	
	Macro	16310.6	
3,2 mm	Non perforated	1634.1	
	Macro	1634.6	
	Non perforated		1654.1
	Macro		1654.6
