

IMPORTANT NOTE: ALWAYS TREAT STAINS ON COLORED FABRIC IMMEDIATELY BEFORE WASHING – YOU DON'T WANT STAIN Rx TO AFFECT THE COLOR OF YOUR FABRIC

***Berries (strawberry, raspberry, blueberry, blackberry...),
Cranberry Juice, Fruit Punch, Pomegranate, Red Wine, Iodine...***

These types of stains come out on contact, right before your eyes – in seconds!

As soon as possible (Always perform a colorfast test before applying):

1. Remove the garment.
2. Moisten the stained area with water.
3. Apply enough Stain Rx to treat stained area.
4. Rinse with water and launder as usual.

***Balsamic Vinegar, Grass, Vanilla Extract, Vinegar, Blood,
Lipstick, Mascara...***

After applying Stain Rx, these types of stains typically need massaging of the stained area to remove the entire stain. The rubbing together of the fabric will lift and dissolve the stain making it easy to rinse out.

As soon as possible (Always perform a colorfast test before applying):

1. Remove the garment.
2. Moisten the stained area with water.
3. Apply enough Stain Rx to treat stained area.
4. Massage the stained area to loosen the stain.
5. Rinse with water and repeat if necessary.
6. Launder as usual.

Beets, Carbon (Like from your grill)...

These types of stains do not come off on contact Stain Rx treats the stain and allows it to be removed by laundering as usual.

As soon as possible (Always perform a colorfast test before applying):

1. Remove the garment.
2. Moisten the stained area with water.
3. Apply enough Stain Rx to treat stained area.

4. Launder as usual.
5. Repeat if necessary before drying

Coffee, Grape Juice, Tea...

Stains such as the above are treated by the addition of Stain Rx and usually must be laundered to remove any residual stain.*

As soon as possible (Always perform a colorfast test before applying):

1. Remove the garment.
2. Moisten the stained area with water.
3. Apply Stain Rx to the stain.
4. Launder as usual.
5. Repeat if necessary before drying

PLEASE NOTE: For larger stains, you may want to apply a larger amount of Stain Rx to a moist, wet towel for application. This method will help you will use less Stain Rx achieving the same positive results.

*Depending on the color of the fabric, there may be a slight tan "sediment" left in the material. This sediment will come out with normal washing.

Carpeting and Upholstery

We have been using Stain Rx on carpeting and upholstery many, many years and have the BEST methods for its use.

Small Stain Removal (Always perform a colorfast test before applying):

1. Moisten the stained area.
2. Put a small amount of Stain Rx on your fingertip and rub out the stain.
3. Vacuum out all the soapy residue using water and your Steam-Vac, carpet shampooer or wet/dry shop vacuum and let dry.

Full Carpeting and Upholstery Cleaning (Always perform a colorfast test before applying):

1. Vacuum the entire carpet or piece of upholstery being treated.
2. Clean the entire carpet or piece of furniture using a Steam-Vac, carpet shampooer or wet/dry shop vacuum - ONLY USE WARM WATER - NO

DETERGENT AT ALL. The Steam-Vac or carpet shampooer sprays in water and vacuums it out leaving the material slightly wet. To use a wet/dry shop vacuum you must mist the area being treated with only warm water then remove with the vacuum. While the carpet is still wet from this step, go to step 3.

3. Depending on the size of the stain, put a small amount of Stain Rx on your fingertip and rub out one stain at a time. For larger stains use a moist white towel and Stain Rx. After treating a stain, remove all of the soapy residue. **IMPORTANT:** You must remove all of the soapy residue using the attachments from the Steam-Vac, carpet shampooer or a wet/dry shop vacuum. Rinse out all of the soapy residue using water and your vacuum. If you leave Stain Rx residue in the treated area dust will stick there forming a gray spot in a few weeks. If this happens, just add water and remove all of the soapy residue.
4. Let dry.

Diamond, Gold and Platinum Jewelry*

You will see an amazingly clean piece of jewelry when you're done!

1. Place all jewelry to be cleaned into a small glass or plastic container.
2. Submerge all jewelry in Stain Rx and let sit overnight.

If you are in a hurry, soak for a shorter time and, if needed, use a small, soft brush or cloth to clean, then rinse with water.

3. After soaking overnight, rinse with water.

* Stain Rx is NOT recommended for cleaning semi-precious stones or any other porous surfaces
